

Electricity cost pass-through trial outcome 2020-21

Barker Barambah Bulk Water Supply Scheme

Background

Irrigation customers in the Redgate Relift section of the Barker Barambah Bulk Water Supply Scheme are participating in a three-year electricity cost pass-through trial, from 1 July 2020 to 30 June 2023.

During the trial, Sunwater's actual, scheme level electricity cost savings will be passed through to irrigation customers at the end of the financial year via a credit applied to their bills. If Sunwater spends more on electricity than we recover from customers, no debits will be applied to customers' bills.¹

The trial covers irrigation customers on the 'Redgate Relift – medium priority' irrigation tariff group only.

2020-21 outcome

In 2020-21, Sunwater spent more on electricity than we recovered from customers in the Redgate Relift section of the Barker Barambah Bulk Water Supply Scheme. This means irrigation customers will not receive a credit on their bills.

The following section explains how the 2020-21 pass-through amount was calculated, and what the impact on irrigation customers would have been if a debit had been applied to their bills.

Calculation of the pass-through amount

The Queensland Competition Authority (QCA) included an allowance for electricity in its fixed and volumetric cost-reflective prices for the Redgate Relift section.

The pass-through amount is determined by deducting Sunwater's actual electricity costs in 2020-21 from the amount allowed by the QCA in its cost-reflective prices and subsequently recovered by Sunwater during the year. This amount is then divided by the Redgate Relift's water usage in 2020-21 to arrive at a dollar per megalitre (ML) pass-through amount.

The pass-through calculation for 2020-21 is detailed in Table 1.

¹ Sunwater will seek to recover our prudent and efficient electricity costs via an end of price period review if the QCA's cost-reflective allowance is less than actual costs. This will not occur as part of the trial.

Table 1: Calculation of the 2020-21 electricity cost pass-through amount¹

QCA electricity cost allowances	
Electricity allowance in fixed cost-reflective price – Redgate Relift	\$4.82/ML
Electricity allowance in volumetric cost-reflective price – Redgate Relift	\$47.22/ML
Scheme-level information	
Water access entitlements – Redgate Relift	1912 ML
Usage – Redgate Relift	233 ML
Actual electricity costs	\$75,086
Pass-through calculations	
Electricity costs recovered via the fixed cost-reflective price	= \$4.82 * 1912 ML = \$9213
Electricity costs recovered via the volumetric cost-reflective price	= \$47.22 * 233 ML = \$10,989
Total electricity costs recovered via cost-reflective prices	= \$9213 + \$10,989 = \$20,202
Total pass-through amount = recovered amount minus actual electricity costs	= \$20,202 - \$75,086 = (\$54,883)
Total pass-through amount per ML = total pass-through amount divided by Redgate Relift water usage (ML)	= (\$54,883) / 233 = (\$235.82)

1. Figures may not sum due to different rounding conventions between this table and the underlying electricity cost pass-through modelling.

Impact on individual customers

As this is a trial, Sunwater will **not** be applying a debit to irrigation customer bills to recoup the electricity costs we did not recover from customers.

If a debit had been applied to bills, it would have been calculated by multiplying the pass-through amount of \$235.82/ML by the irrigation customer's 2020-21 water usage at a water account level. For example, if an irrigation customer's 2020-21 water usage was 10 ML, then the debit amount would have been \$2358.20.

How can I find out more?

More information is available in the frequently asked questions document available on the Sunwater [website](#).

If you have a query in relation to the calculation of the pass-through amount, please contact customer support via email customersupport@sunwater.com.au or phone on 13 15 89.
