

## Current volumes available for temporary transfer per operational zone

### Bundaberg Water Supply Scheme

Data prepared and current as at: 4 April 2024 12:00 AM

#### Kolan subscheme

Medium priority				
Zone	AA	AB	AC	AD
Min	36,025	2,785	0	46,750
Current	39,137	2,556	2,117	60,847
Max	42,553	6,790	5,160	67,180
Water in	3,416	4,234	3,043	6,333
Water out	3,112	-229	2,117	14,097

High priority				
Zone	AA	AB	AC	AD
Min	3,100	0	0	3,990
Current	3,280	53	0	3,991
Max	3,600	105	280	4,190
Water in	320	52	280	199
Water out	180	53	0	1

#### Burnett subscheme

Medium priority			
Zone	CA	CB	GZ
Min	64,325	4,450	2,855
Current	178,550	31,019	21,644
Max	189,325	156,760	41,235
Water in	10,775	125,741	19,591
Water out	114,225	26,569	18,789

High priority			
Zone	CA	CB	GZ
Min	8,840	0	0
Current	34,323	2,225	500
Max	36,570	37,050	20,000
Water in	2,247	34,825	19,500
Water out	25,483	2,225	500

1. All volumes displayed in the above tables are in megalitres (ML)

2. Explanation of data displayed in the above tables can be found on page 2

## More information

For more information about the zone caps for the scheme please refer to the [Bundaberg Water Supply Scheme Resource Operations Licence Operations Manual](#), Chapter 4 Seasonal water assignment rules.

The data prepared in the above tables should be used as a guide only. Customers and water brokers are encouraged to contact Sunwater prior to finalising a temporary transfer to confirm there is water available to complete the trade.

Please see below explanation of the data displayed in the above tables.

Term	Explanation
<b>Zone</b>	A geographic location defined by a reach of a watercourse for defining the location of a water allocation and operational arrangements under the above operations manual.
<b>Min</b>	Minimum trading cap. The potential take volume (water available for temporary transfer) must be greater than or equal to the minimum volume for the zone for the priority group.
<b>Current</b>	Potential take volume (water available for temporary transfer) for a zone group. This is the sum of: <ul style="list-style-type: none"><li>the nominal volumes for all water allocations located within a zone for the priority group at the start of the water year</li><li><b>plus</b> the volume seasonally assigned into the zone for the priority group for the current water year</li><li><b>minus</b> the volume seasonally assigned out of the zone for the priority group for the current water year.</li></ul>
<b>Max</b>	Maximum trading cap. The potential take volume (water available for temporary transfer) must be less than or equal to the maximum volume for the zone for the priority group.
<b>Water in</b>	Current volume of water available to trade (temporary transfer) into a zone
<b>Water out</b>	Current volume of water available to trade (temporary transfer) out of a zone

In addition to meeting the scheme's zone caps, additional restrictions on temporary transfers may be applied at Sunwater's discretion in extremely dry conditions or when the temporary transfer results in the transfer of water to high loss areas. Please refer to pages 2 and 3 of the application form [here](#) and the [Bundaberg local conditions](#) for all terms and conditions that apply to temporary transfers.
