Subject: Reminder – Ben Anderson Barrage Works

SunWater has commenced lowering the water level at Ben Anderson Barrage in preparation for maintenance works.

Please note that we have commenced lowering the water level a week earlier than initially advised due to higher than expected water levels in the barrage.

Ten steel shutters will be replaced as part of the works and adjustments will be made to the upstream rockfill and concrete surface.

The water level will be gradually lowered to approximately 1.7 metres by 1 September 2016 to allow safe access to carry out the works.

Periods of increased heavy vehicle movement and minor noise disruptions may occur during the hours of 6am to 6pm, Monday to Saturday.

Works are scheduled to be completed in October 2016 with the aim of raising the storage level to approximately 2.5 metres.

SunWater will endeavour to minimise the impacts on customers, local residents and the natural environment. The works will not impact the announced allocations which were made on 1 July 2016.

SunWater would like to thank you for your continued patience whilst we carry out these important works. Should you have any enquiries, please contact SunWater on 13 15 89.
