

Welcome to the SunWater Information Bulletin that we will be distributing quarterly by SMS and Email to provide you with a quarterly Scheme update and keep you updated with information about your Scheme.

Scheme Rules:

There are two types of water sharing rules used in the Macintyre Brook WSS:

Announced Allocation (AA):

- Relatively simple rules (formula shown in ROP)
- Available water shown as a percentage (%) of the total volume of water allocations in the scheme
- One balance in the management of AA
- **Water balance** is determined based on announcements, usage and trades.

Individual Continuous Share (ICS):

- Account represents share of conceptual storage (respective full supply volumes for Coolmunda Dam, Ben Dor & Whetstone Weirs)
- There are two balances in the management of ICS
- **Water balances** are determined individually based on your share size, actual inflows, losses, usage and trades. (Share size is the allocation holder's share in megalitres (ML) of the total conceptual storage)
- **Resource CAP** relates to your individual capacity share. It is the maximum volume of water over a single water year that you are permitted to take.
- Your available water to be taken is the lesser of the two balances

Refurbishment Program 2018

- 18MAB01 – Coolmunda Dam – 20 Year Comprehensive Risk Assessment - \$192,516
- 18MAB03 – Coolmunda Dam – Install new gauges to enable accurate level measurement - \$18,502
- 18MAB04 – Coolmunda Dam – Study Rating Review – Tailwater - \$12,993
- 18MAB05 – Ben Dor Weir – Repairs to Ben Dor Weir valve - . \$20,007
