

CHINCHILLA WEIR WATER SUPPLY SCHEME

START OF WATER YEAR ANNOUNCED ALLOCATION PREDICTION GRAPH as at 1 July

This prediction graph has been calculated using the rules in the Condamine Balonne Resource Operations Plan (Aug2014) as a tool to assist customers in providing an indication of what the announced allocation may look like at the start of the water year depending on the volume held in the storages at the time. Many variables can affect these predictions as such if you rely on them for any purpose, you do so at your own risk.

Please note this graph does not replace SunWater's requirement for making announced allocations at the start of the water year. SunWater will calculate the actual announced allocations within the time frames specified in the Resource Operations Plan and publish the announcements accordingly.

**Many variables affect these predictions. If you rely on them for any purpose, you do so at your own risk.*

The storages that are associated with this announced allocation prediction:

- Chinchilla Weir

Current levels of storages can be found on the following webpages.

- <http://water.bom.gov.au/waterstorage/awris/>
- http://www.sunwater.com.au/_data/win/reports/flosummary.htm

Or if using a mobile device you can follow this link:

- http://www.sunwater.com.au/_data/win/reports/_mobile/flosummary_mobile.htm

Assumptions:

- No allowance for drawdown of storage from the date that you accessed the current storage volumes to 1 July has been considered
- CSG water balance in storage is OML

How the prediction graph works:

- You will need to access the current storage volume
- Add the volumes from each storage together and then refer to the "Scheme Storage Capacity" on the graph and find the "Start of Water Year Announced Allocation" percentage that is relative to the Storage Capacity
- For example if the current storage capacity was 7,335ML then the predicted announced allocation on 1 July would be High Priority 100% and Medium Priority 30%
- Allowances for any change in storage volumes between the date that you have accessed the current volumes and 1 July should be considered
