Dawson Valley WSS Carry Over Application – Conditions

General

Carryover enables customers to Carryover unused available water at the end of a Water Year to become available in the next Water Year within the limits and subject to the conditions and rules below.

Any Riparian Allowance is deemed to be the first water used through offtakes, prior to any Carryover water used.

Application

To apply for Carryover please complete and sign this application form and submit it to SunWater.

Applications for Carryover must be received not less than 2 working days prior to the end of the Water Year.

Carryover does not alter the customer's peak flow rate or roster conditions.

Carryover is only available to customers who are metered by SunWater.

Outstanding Accounts

This application will not be assessed by SunWater unless you have settled any outstanding accounts with SunWater.

If you are unsure whether you have any outstanding accounts and wish to avoid unnecessary delays, please contact your SunWater on 13 15 89 prior to submitting this application.

Maximum Volume of Carryover and Storage Losses

The maximum volume that can be carried over and the relevant losses to be applied for the scheme are shown in the table below:

SUBSCHEME	Cap ML	Loss
Upper subscheme	10% of total nominal water allocation	5%
Lower subscheme	10% of total nominal water allocation	5%

If the sum of the carryover volumes applied for exceed the cap, individual carryover volumes above 10% will be reduced proportionately.

Cancellation Rule

The Carryover arrangements for the Water Year stop:

1. On the 1 November or;
 2. Upper Dawson WSS: When the overflow of **Gyranda Weir** commences. Overflow is defined as when the Gyranda Weir headwater gauge is 1cm above full supply level as a result of inflow to the weir.
 3. Lower Dawson WSS: When an overflow of **Neville Hewitt Weir** commences. Overflow is defined as when the Neville Hewitt Weir headwater gauge is 1cm above full supply level as a result of inflow to the weir
- Customers must provide current meter readings to SunWater for all outlets within 48 hours of the spill beginning or 31 October.
 - All water usage will be allocated against Net Available Water

- All unused Net Available Water at the beginning of the spill event is cancelled.
- The water usage will be offset against the original Carryover volume. If the water usage up to the beginning of the spill event is less than the original Carryover volume, then the difference between the two will be deducted from the available water balance. (ie: where there is a negative water balance as result of the application of the Guidelines, SunWater may take action under the contract to ensure that the customer does not have a negative water balance)

Net Available Water (NAW)

This is the water balance at the end of the Water Year after adjustment for the Scheme Cap rule and the subsequent reduction of the volume for the Loss Factor.

Temporary Transfer Warning

Customer's intending to Temporary Transfer water need to be aware that a Carryover can be cancelled in accordance with the applicable Cancellation Rules. This may result in your account having a negative water balance.

In these circumstances SunWater may be required to report you to the Department of Natural Resource Management.

Example 1: Temporary Transfer with Carryover

You might apply to Carryover your remaining volume of 8ML from the 2015/2016 Water Year. SunWater may approve the carryover of 4ML. As a result of the Carryover (4ML) and the 2016/2017 announced allocation (20ML) you will have 24 ML available during 2016/2017. You have decided not to use any of this water but to Temporary Transfer the entire 24ML.

However, the Carryover is then cancelled in October. You have not used any of the Carryover water (ie no water has passed through your meter) but, you have finalised the Temporary Transfer of 24ML. The difference between **your** water use (at the time of the cancellation) (ie 0ML) and the original Carryover volume (ie 4ML), is deducted from your water balance at the time of the cancellation. **The volume you have temporary transferred is not factored into this calculation, it is based entirely on water usage as measured at your meter.**

Therefore, you will have an entitlement to 20ML but have temporary transferred 24ML. You will have a negative balance and SunWater will provide you with notice that you are in breach of the standard supply contract. If this breach is not remedied, SunWater will be required to notify the Department of Natural Resource Management.

Example 2: Carryover with Riparian Allowance

You have a Riparian Allowance of 2ML as well as an allocation of 20ML. In 2015/2016 you apply for and are granted 4 ML of Carryover water. If the Carryover is cancelled in October and your water use in 2016/2017 is 4ML, then the first 2ML is considered riparian water use and 2ML is considered Carryover water use. Riparian water use is always considered the first water used. Your Water Account will be adjusted to deduct 2ML (4ML approved Carryover – 2ML Carryover water use) from your available water.
