GUIDELINES AND CONDITIONS

St George
47A Roe St
PO Box 629
St George
QLD 4487

Ph: 13 15 89
Fx: 4620 8510

General

Water relocation enables a person to move water to another location using SunWater infrastructure.

Water Use Charges

The Part B Channel rate applies for water relocation usage, these charges are published in the Fees & Charges Schedule.

Meter Reads

SunWater require meter reads to enable it to correctly account for the water taken and to exclude this water from attracting normal water consumption charges.

Release point (ie the location at which the water is released into the watercourse) and the delivery point (ie the location at which the water is taken) are to be metered. If the point of release is not metered then the applicant must seek approval from the department for a relevant method of measurement.

Unless prior arrangements are made, the readings must be provided to SunWater by the Customer immediately prior to commencement and immediately at completion. SunWater can take these readings however a meter reading fee will apply.

Other Conditions

It is the responsibility of the applicant of the relocation water to satisfy any additional requirements of the Department of Natural Resources and Water.

Terms and Conditions

SunWater must receive the application at least 14 days prior to the customer requiring the supply.

Any financial arrears must be settled before a relocation application can be approved unless a satisfactory arrangement is made with SunWater.

Regardless of any approval from NRW for relocation of water SunWater may withdraw the supply of water under the approval of this application at any time. SunWater will contact and notify the customer in such circumstances.

Relocation Product will not be available when the storages in the system are spilling.

If, during a relocation event, the storages in the system spills, any water released as part of relocation water will not be available for extraction and the relocation product ceases. At this point the approved application is deemed to have finished.

SunWater will determine the appropriate losses to be applied on relocation water.

The seller warrants that the quantity of water to be released will not have a detrimental impact on other users or SunWater.

Relocation water is considered outside of peak flow entitlements therefore, if the delivery channel system is in peakflow then relocation of water ceases.

SunWater approval is required for the following:

- The time when water can be released and diverted.
- The point of the channel where water must be released and diverted.
- The offtake for taking water and measurement of the water taken.
- The manner in which water is to be released into the channel and measurement of water released.

By signing this Form, the Customer:

- Releases and indemnifies SunWater from any action or claim arising from the relocation;
- Agrees to take water in accordance with SunWater's reasonable requirements, which may include the time(s) and rate at which water can be taken;
- Agrees to take the water through the Customer's Nominated Works as specified on the front of this form by reference to the meter number;
- Acknowledges that SunWater does not warrant the quality of the water taken.

Release and diversion of water must be consistent with the above approvals. These guidelines and conditions are solely at SunWater's discretion.

CONDITIONAL APPROVAL

SunWater endorses the relocation application form conditional upon the applicant receiving NRW approval for relocation of water. Please note that this endorsement covers only the operational aspect associated with the delivery of this water. As any water put into a watercourse is vested in the state regardless of any intent that the water be taken at another location, as such SunWater takes no responsibility for Water Quality and other environmental/ecological requirements of input water (ie. water released to a watercourse).
