

Upper Condamine Water Supply Scheme

February 2017

Water Account Statements

Water account statements are issued by SunWater to keep you abreast of your announced allocation water balance. In the Upper Condamine scheme water taken during an announced stream flow event is classified as stream flow and not included in your water account statement. The rules in the Upper Condamine scheme allow for you to take up to 100% of your nominal allocation. This is a combined total of your stream flow and announced allocation usage, so record keeping of your streamflow usage needs to be maintained separately. SunWater are investigating ways to improve the communication of your stream flow usage to you and will provide more information when the investigation has been finalised. Please do not hesitate in calling the Customer Support team on 13 15 89 to check your current usage and balances.
