

SunWater

Energy Management Policy

SunWater is Queensland's major bulk water supplier. In addition to planning, designing and developing our own water infrastructure, we also offer our expertise to a range of industry clients who require water infrastructure facility management and consultancy services.

SunWater is committed to the efficient use of energy by identifying and implementing opportunities to minimise energy consumption and thus reduce the production of greenhouse gases.

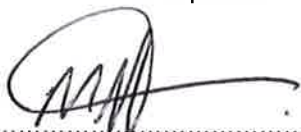

SunWater has established processes to ensure achievement of the objectives of the national initiatives for Energy Efficiency Opportunities and for National Greenhouse and Energy Reporting. We provide adequate financial, human and educational resources to support effective energy management practice.

SunWater complies with all relevant energy management legislation and related standards, codes of practice and industry guidelines. We set measurable targets for continual improvement in energy efficiency, and report annually on our energy management performance.

SunWater management, staff and subcontractors are actively encouraged to identify energy efficiency opportunities and to take responsibility for minimising the consumption of energy in their daily activities.

Through our systems and continual improvement processes, SunWater aims to improve energy efficiency by:

- Providing **leadership** that sets clear goals for energy efficiency and assigns adequate resources (people, time and money) to achieve those goals.
- Providing education and training to our **people** so that they have the skills and competencies required to effectively undertake energy management.
- Ensuring that SunWater systems capture sufficient **information** and **data** to allow reliable **analysis** to support the energy management processes.
- Conducting business wide assessments to **identify** and **evaluate opportunities** for improving energy efficiency.
- Enhancing processes to facilitate timely **decision making** for energy management.
- Regularly **communicating** energy management performance both internally and to the public.

A handwritten signature in black ink, appearing to read "Peter Boettcher", is written over a horizontal dotted line.
