

# This is a Dam

Blue the Water Drop says there are  
**2 things we need to do**  
to stay safe near a dam ...

**Hi Kids!**

When you are near a dam – look around.

- 1 **Are there warning signs?** What do they say?  
Ask your family and friends to check for them too.

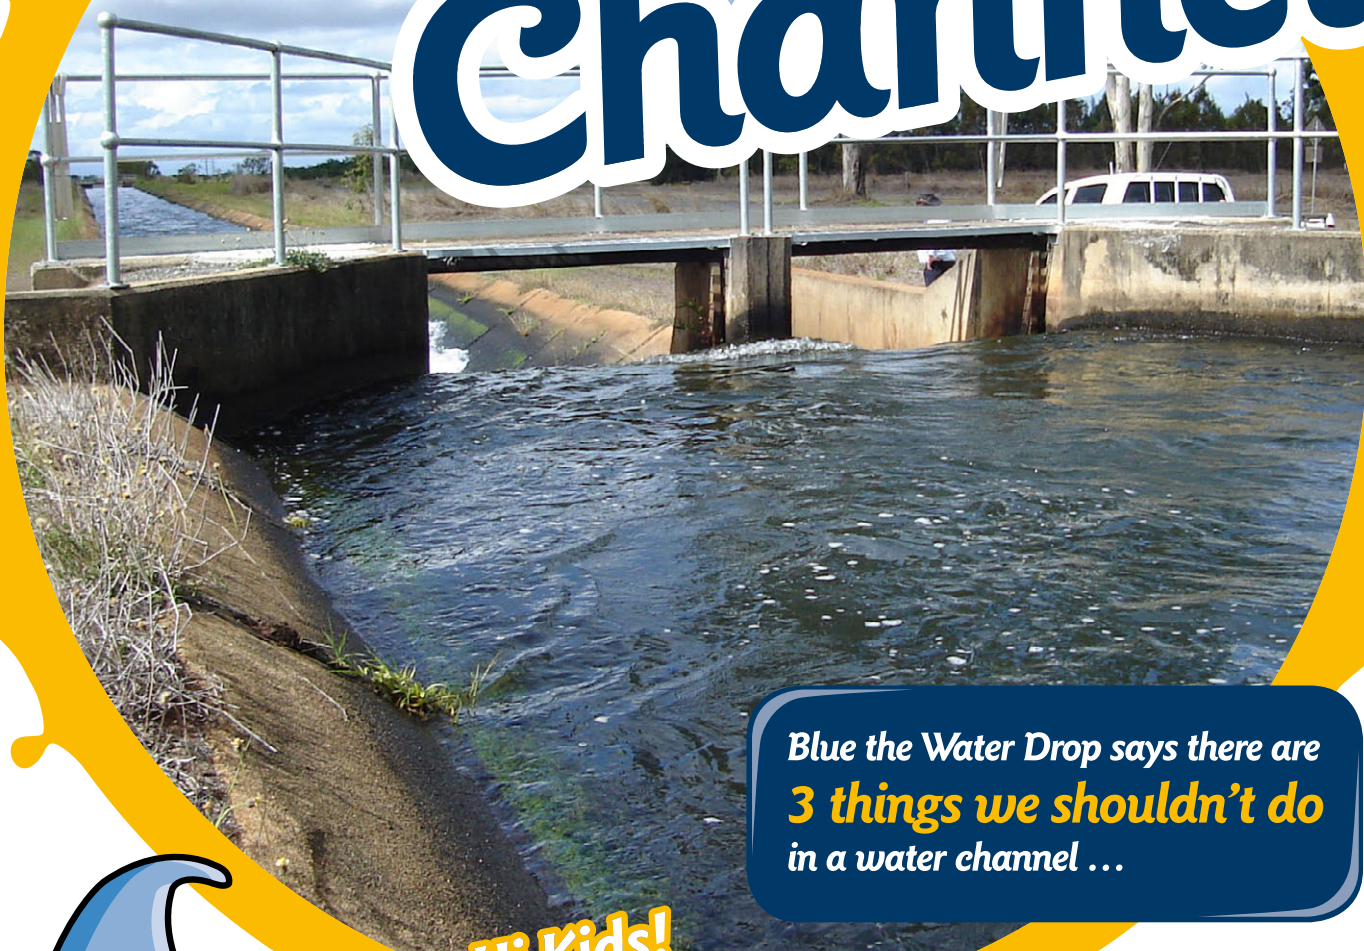

When swimming in dams, **stay right away from the walls.**

- 2 There are pipes that can suck you in, and you could drown.  
**Always swim where signs say it's safe.**

**Don't get sucked in – play safe, stay away!**

# This is a Water Channel

Blue the Water Drop says there are **3 things we shouldn't do** in a water channel ...

Hi Kids!

- ① **Don't drink the water.** It is not clean and could make you very sick.
- ② Don't swim in water channels. Gates let the water in and out very quickly, and **you could become trapped** in deep water.
- ③ **The sides are very slippery.** Stay away. You might fall in and not be able to climb back out.

**Don't get sucked in – play safe, stay away!**

# This is a Weir

Blue the Water Drop says we should  
**stay away from weirs**

**Hi Kids!**

A weir is a big wall that holds back river water to use later on farms and large areas.

- ① When the water is flowing, **it moves extremely fast.**
- ② If you get caught in the flow and pulled over the weir, **you might drown.**

**Don't get sucked in – play safe, stay away!**
